Disclosure Statement
Operating Principles for Impact Management

SIFEM (Swiss Investment Fund for Emerging Markets)

March 31, 2023

The Swiss Investment Fund for Emerging Markets (SIFEM) is a founding signatory to the Operating Principles for Impact Management (the Impact Principles). The Principles provide a reference point against which the impact management systems of funds and institutions may be assessed. They draw on emerging best practices from a range of asset managers, asset owners, asset allocators, and development finance institutions.

This Disclosure Statement affirms that SIFEM’s core/client business, including (a) impact management systems; (b) policies and practices; and (c) investments (fund investments and loans) are managed in alignment with the Principles.

In 2022, SIFEM changed its organizational structure, mandating two distinct managers with the investment and monitoring responsibilities. Tameo Impact Fund Solutions SA was appointed as the business services manager and took up its mandate in September 2022, while Obviam AG acted as portfolio manager throughout the year before handing over investment and portfolio-related tasks to responsAbility Investments AG effective as of 1 March 2023. The two entities entrusted with these tasks will work together to manage SIFEM’s assets. The Portfolio Manager is responsible for assessing and monitoring the positive and negative impacts of each SIFEM investment, whereas the Business Services Manager is responsible for monitoring and reporting on the impact performance at a portfolio level.

Total assets under management in alignment with the Principles is US$ 915.3 million¹ as of December 2022.

Jörg Frieden,
Chairman of the Board

---

¹ Portfolio exposure includes equity and quasi-equity instruments, as well as current income earning instruments, and represents total active commitments as of December 31, 2022.
² The sole purpose of this Disclosure Statement is to fulfill SIFEM’s obligations pursuant to Principle 9. This document shall not constitute and should not be construed as an offer, solicitation or invitation to buy or sell any securities, financial instruments or services whether described herein or otherwise, or as any prospectus or investment-related advice in relation thereto, nor is it intended to form the basis of a decision to participate in any investment. SIFEM makes no guarantee or other promise as to any outcomes, including any financial or development impact results that may be obtained from the practices disclosed in this statement. While past performance may be analyzed in this Disclosure Statement, past performance should not be considered indicative of future performance. Accordingly, SIFEM shall not have any liability to any of the recipients of this Disclosure Statement, nor to any other party in connection with or arising in any way from, or in relation to, the information or any opinions expressed in this Disclosure Statement, and SIFEM does not accept any responsibility whatsoever for any action taken, or omitted to be taken by any party on the basis of any matter contained in, or omitted from, the Disclosure Statement.
Principle 1 – Define strategic impact objective(s), consistent with the investment strategy: The Manager shall define strategic impact objectives for the portfolio or fund to achieve positive and measurable social or environmental effects, which are aligned with the Sustainable Development Goals (SDGs), or other widely accepted goals. The impact intent does not need to be shared by the investee. The Manager shall seek to ensure that the impact objectives and investment strategy are consistent; that there is a credible basis for achieving the impact objectives through the investment strategy; and that the scale and/or intensity of the intended portfolio impact is proportionate to the size of the investment portfolio.

- As the development finance institution of the Swiss Government, SIFEM belongs to the instruments of bilateral development assistance financed by the Swiss government to foster private sector development in developing and emerging countries, complementing other measures of economic development assistance.

- Since the establishment of SIFEM in 2011, the Swiss Government has set strategic objectives for SIFEM including specific development impact objectives. The current strategic framework assigned to SIFEM for the period 2021-2024 includes a variety of development objectives aligned with the Agenda 2030 for Sustainable Development (SDGs) and with the Paris Agreement on climate change. Examples of development objectives are: to create or maintain at least 10,000 jobs every year, to have at least 25% of new investments fully dedicated to climate finance, and to have at least 20% of the investment commitments qualify for the 2XGlobal initiative (formerly 2XChallenge) to contribute to gender quality.

- As reflected in its impact policy adopted in 2017, all SIFEM investments are made with the specific intent to generate a measurable development impact, with specific monitoring indicators. For this purpose, SIFEM uses a specific Theory of Change at the level of its portfolio linked to a results framework to assess, analyze and monitor its investments. This framework is based on the SDGs and used consistently to maximize the development effects linked to SIFEM’s investment decisions throughout the whole investment cycle, starting with the analysis of investment opportunities.

- SIFEM’s Theory of Change underpins all of SIFEM’s investments with the logic that financial intermediation plays a pivotal role in private sector growth in developing countries and emerging markets. SIFEM focuses on strengthening local intermediaries in their capacity to deliver long-term capital to SMEs and fast-growing companies. SIFEM’s role is thus both financial (provision of long-term finance) and non-financial (hands-on advice to financial intermediaries), and the combination of these two roles contribute to the sustainability of SIFEM’s outcomes.

Principle 2 – Manage strategic impact on a portfolio basis: The Manager shall have a process to manage impact achievement on a portfolio basis. The objective of the process is to establish and monitor impact performance for the whole portfolio, while recognizing that impact may vary across individual investments in the portfolio. As part of the process, the Manager shall consider aligning staff incentive systems with the achievement of impact, as well as with financial performance.

- Development impact objectives are established by the Swiss Government, the sole investor of SIFEM, and are reported annually. To monitor impact, SIFEM collects a set of standard impact indicators from all investees, as well as specific indicators tailored to each investment. In the case of fund investments, the data not only covers the direct investee level (fund managers) but also every portfolio company. In the case of financial institutions, the data collected covers the institution itself, and the development effects such as indirect jobs induced by loans provided to clients by the Financial Institution are estimated via model calculations. The data is then aggregated at a portfolio level by the Business Services Manager and reported annually to the Swiss Government and the public. This oversight mechanism ensures the achievement of development impact objectives or the justification for any deviation.

- Performance against the achievements of the strategic objectives —including development impact— is built into the staff incentive system of the Portfolio Manager. In its oversight function, the Business Services Manager does not have a variable incentive system.

Principle 3 – Establish the Manager’s contribution to the achievement of impact: The Manager shall seek to establish and document a credible narrative on its contribution to the achievement of impact for each investment. Contributions can be made through one or more financial and/or non-financial channels. The narrative should be stated in clear terms and supported, as much as possible, by evidence.

- As per its mandate and strategic framework, all SIFEM investments need to respect the principles of sustainability, financial additionality, value additionality and leverage. SIFEM’s development role and expected contribution are part and parcel of the presentation of each transaction to the Investment Committee, including a description of the financial and value additionality of SIFEM. A scoring system against these principles is used to qualify each investment proposal submitted to SIFEM’s investment committee.

- The development case of each investment as well as the role of SIFEM are assessed at the outset of the screening process and are subsequently validated through integrated ESG and Impact due diligence processes.
Principle 4 – Assess the expected impact of each investment, based on a systematic approach: For each investment the Manager shall assess, in advance and, where possible, quantify the concrete, positive impact potential deriving from the investment. The assessment should use a suitable results measurement framework that aims to answer these fundamental questions: (1) What is the intended impact? (2) Who experiences the intended impact? (3) How significant is the intended impact? The Manager shall also seek to assess the likelihood of achieving the investment’s expected impact. In assessing the likelihood, the Manager shall identify the significant risk factors that could result in the impact varying from ex-ante expectations. In assessing the impact potential, the Manager shall seek evidence to assess the relative size of the challenge addressed within the targeted geographical context. The Manager shall also consider opportunities to increase the impact of the investment. Where possible and relevant for the Manager’s strategic intent, the Manager may also consider indirect and systemic impacts. Indicators shall, to the extent possible, be aligned with industry standards and follow best practice.

- SIFEM assesses the contribution of all prospective investments to specific development priorities reflected in its strategic objectives, as well as the impact intentionality of fund managers/financial institutions through which SIFEM may invest. This analysis is supplemented by contextual analysis and research in order to come up with a credible assessment of the expected development effects of the investment, considering the particular institutional, socio-political and economic context.

- SIFEM uses a corporate rating tool (SIFEM GPR), originally developed by the German Development Finance Institution (DEG), which is used to appraise investments and track their development performance over time. The GPR assessments are based on the investment contribution to eight development areas or pillars: (1) employment, (2) gender equality, (3) training, (4) mobilization of local capital/savings, (5) financial sector diversification, (6) diversification of credit allocation, (7) institution building, and (8) company development. A standardized scorecard is assigned for each of the sub-indicators in the individual pillars based on internal discussions, as well as subsequent discussions with financial intermediaries during annual monitoring calls. This system allows to compare the impact of any SIFEM investment on an indicator-by-indicator basis, but also on an aggregate investment-by-investment basis. The index also provides a way to benchmark each investment against the average score of the entire portfolio and to monitor its evolution over the entire investment lifecycle.

- The contribution and link to specific SDGs is assessed in the light of the credibility of the expected contribution (logical contribution) and the ability to use specific metrics/indicators to measure the expected contribution. A maximum of three SDGs per investment can be claimed, to focus the analysis on the most relevant development effects.

- Each investment proposal submitted to SIFEM’s investment committee contains a development impact section, which establishes the expected contribution to specific development outcomes, as per SIFEM’s Impact Policy. Opportunities to enhance the impact – as recognized by SIFEM’s Impact Policy – are also part of the investment committee decision process.
Principle 5 – Assess, address, monitor, and manage potential negative impacts of each investment: For each investment the Manager shall seek, as part of a systematic and documented process, to identify and avoid, and if avoidance is not possible, mitigate and manage Environmental, Social and Governance (ESG) risks. Where appropriate, the Manager shall engage with the investee to seek its commitment to take action to address potential gaps in current investee systems, processes, and standards, using an approach aligned with good international industry practice. As part of portfolio management, the Manager shall monitor investees’ ESG risk and performance, and where appropriate, engage with the investee to address gaps and unexpected events.

- SIFEM commits all its investees (funds and financial institutions) to observe its Approach to Responsible Investment and requires those investees to ensure compliance with that policy at the level of their respective underlying portfolio companies. Investees adhere to national regulations and work towards the adoption of the relevant international standards defined in the Approach to Responsible Investment.

- In addition to assessing investees’ compliance with SIFEM’s Approach to Responsible Investment, SIFEM assesses the ESG risks of each of its investments using a set of criteria that is harmonized with other European Development Finance Institutions. This includes a risk assessment of the sector of investment, macroeconomic indicators, and the investee’s governance practices. Each investment is subsequently assigned a risk rating, which is considered in the investment decision and monitored throughout the life of the investment.

- SIFEM discusses with each investee respective expectations regarding ambition to meet, or even exceed the requirements contained in its Approach to Responsible Investment, and the extent to which those expectations are aligned. SIFEM also assesses the support that partners may need to adopt more responsible business practices.

- Recognizing that some of our partners may need time to reach compliance with internationally accepted standards, SIFEM may draft Environmental and Social Action Plans (ESAPs) that outline the steps and timeframes needed to meet requirements. These ESAPs are integrated into the side letter accompanying investment legal agreements, which are legally binding documents.

- In line with its procedures, SIFEM regularly monitors the ESG performance of its investments and intervenes whenever necessary to ensure compliance with its Approach to Responsible Investment.

Principle 6 – Monitor the progress of each investment in achieving impact against expectations and respond appropriately: The Manager shall use the results framework (referenced in Impact Principle 4) to monitor progress toward the achievement of positive impacts in comparison to the expected impact for each investment. Progress shall be monitored using a predefined process for sharing performance data with the investee. To the best extent possible, this shall outline how often data will be collected; the method for data collection; data sources; responsibilities for data collection; and how, and to whom, data will be reported. When monitoring indicates that the investment is no longer expected to achieve its intended impacts, the Manager shall seek to pursue appropriate action. The Manager shall also seek to use the results framework to capture investment outcomes.

- To track the progress of an investment over time, the corporate rating tool described in Principle 4 is used to establish an ex-ante benchmark at the investment appraisal stage. After the execution of an investment, assessments are conducted every second year to monitor and track the occurrence of actual development effects (ex-post process).

- Each year, SIFEM collects and monitors data on the key development effects of the underlying portfolio companies. Underlying portfolio companies report on the direct effects of their operations, using indicators which are harmonized, to the extent possible, with other Development Finance Institutions.

- SIFEM uses internationally accepted harmonized approaches and indicators whenever possible. This includes metrics from the IRIS catalogue of indicators managed by the Global Impact Investing (GIIN) network –of which SIFEM is an active member- and the Harmonized Indicators for Private Sector Operations (HIPSO), which are used by multilateral development banks and development finance institutions, as well as the Joint Impact Indicators (GIIN), which are harmonized between both the GIIN and HIPSO.

- These metrics capture portfolio-wide effects applicable to all investments, as well as sector-specific effects. The main metrics and indicators collected annually by SIFEM for development effects tracking and reporting are shown below, in relation to their corresponding SDGs:
Principle 7 – **Conduct exits considering the effect on sustained impact**: When conducting an exit, the Manager shall, in good faith and consistent with its fiduciary concerns, consider the effect which the timing, structure, and process of its exit will have on the sustainability of the impact.

- **SIFEM** considers the effect on maintaining development impact when making exit decisions in its equity portfolio. This can affect the timing, structure, and choice of whom to sell to.

- **SIFEM** invests primarily in local or regional investment funds as a limited partner. When a particular fund reaches the end of its expected life with no underlying assets remaining, the fund structure is dissolved.

- Direct debt investments are self-liquidating without exit decisions. Future investment decisions for a debt investment may be affected by the investment’s impact performance and adherence to ESG standards.

Principle 8 – **Review, document, and improve decisions and processes based on the achievement of impact and lessons learned**: The Manager shall review and document the impact performance of each investment, compare the expected and actual impact, and other positive and negative impacts, and use these findings to improve operational and strategic investment decisions, as well as management processes.

- **SIFEM** uses its corporate impact rating tool to analyse the expected development effects of SIFEM’s new commitments, compares actual development effects measured through ex-post data collection of the active investments versus expectations formed before investment, and presents conclusions for investments exited during the year.

- **SIFEM** conducts various case studies on an annual basis to take a closer look at the effects and value-add of SIFEM’s investments in specific contexts. Since 2018, SIFEM’s Impact Reports take specific thematic issues and report on the lessons learned. SIFEM also publishes case studies that portray companies in which SIFEM has invested and illustrate the expected development effects. External reviews, evaluations or thematic studies are also carried out during each strategic cycle, which are either commissioned by the Board or the Shareholder.

Principle 9 – Publicly disclose alignment with the Principles and provide regular independent verification of the alignment: The Manager shall publicly disclose, on an annual basis, the alignment of its impact management systems with the Impact Principles and, at regular intervals, arrange for independent verification of this alignment. The conclusions of this verification report shall also be publicly disclosed. These disclosures are subject to fiduciary and regulatory concerns.

- This Disclosure Statement re-affirms the alignment of SIFEM’s procedures with the Impact Principles and will be updated annually.

- SIFEM plans to conduct an independent verification of its practices every four years (i.e., once per strategic cycle) unless there are significant changes to its practices that warrant a more frequent review. The first independent verification of SIFEM’s alignment took place in November 2020.

- Information on the current independent verifier is as follows:

  **Name and Address:** Steward Redqueen
  Kinderhuisingsel 4a/b
  2013 AS Haarlem, The Netherlands

  **Qualifications:** Steward Redqueen is a specialized consultancy that works across the globe advising organizations on impact and sustainability, with 20 years of experience working for multilateral development institutions and bilateral development finance institutions.

  **Most Recent Review:** November 20, 2020
